ANNUAL WATERLINE REPLACEMENT PROJECT

PROJECT OUTLINE

- **Lakeview Ave.** Kelsey Pl. to Riverdale Pl.
- **Kelsey Pl.** Lakeview Ave. to end of cul-de-sac
- **Studio Pl.** Lakeview Ave. to Van Buren Blvd.
- **Morton Ave.** Limonite Ave. to 63rd St.
- **Eucalyptus Ave.** Limonite Ave. to 63rd St.
- **Clay St.** Van Buren Blvd. to connection point
- **Clay Booster Station**
Associated SCADA improvements

Like any infrastructure system, JCSD's pipes, valves, meters, etc. are assessed for repair and replacement throughout the year. This is an important part of water supply reliability and prevents outages and leaks. To assist staff in this process, the Strategic Plan outlines priorities and the Annual Budget ensures funding is available. Staff provides information including the location and history of leaks, pipe age and composition, as well as administrative services for construction. These services typically include bid procurement, construction oversight, and project management.

This year's annual replacement project focuses on areas that were acquired from the Jurupa Heights

and Pedley Water Company. Due to the age and material used, these pipelines experience numerous leaks and require an extensive amount of maintenance. Replacing them now is less expensive and disruptive than waiting until a major leak occurs. Every effort is made to minimize disruptions during construction.

This year the waterline replacements are:

- **Lakeview Avenue:** Approximately 756 feet of 8-inch diameter waterline from Kelsey Place to Riverdale Place
- **Kelsey Place:** Approximately 513 feet of 8-inch diameter waterline from Lakeview Avenue to the end of cul-de-sac
- **Studio Place:** Approximately 404 feet of 8-inch diameter waterline from Lakeview to Van Buren Boulevard
- **Morton Avenue:** Approximately 625 feet of 8-inch diameter waterline from Limonite to 63rd Street
- **Eucalyptus Avenue** – Approximately 966 feet of 8-inch diameter waterline from Limonite to 63rd Street
- **Clay Street:** Approximately 160 feet of 12-inch diameter waterline from Van Buren Boulevard east to connection point
- **Clay Booster Station:** Add a 6-inch diameter CLA-VAL and associated SCADA improvements

HISTORICAL FACT

JCSD was originally formed in 1956 to install a sewer system. Area residents also expressed an interest in a safe reliable water supply. In response to this, three water companies; Jurupa Heights Water Company, La Bonita Mutual Water Company, and the Monte Rue Acres Mutual Water Company were consolidated to provide water. A fourth company was purchased from Rubidoux Community Services District. The consolidation and improvements were completed in 1966.

EDIBLE GARDENING

a healthy choice!

Gardening may be your hobby, an item on your to-do list, or perhaps even your passion. Regardless of your reason for being out in the garden, edible gardening might be just what you need to keep healthy. Gardening is a healthy activity that can be enjoyed by people of all ages.

Gardening can help relieve stress. In today's fast-paced world that drains our attention and overloads us with information, gardening provides the perfect outlet to connect with nature, unwind, and clear your mind. Gardening gets you outdoors and your blood moving. Digging, weeding and planting require strength and stretching, making it the perfect low impact exercise. Edible gardening provides the added benefits of fresh food, and an understanding of food and its origin. The food you grow yourself will be the freshest and healthiest food you can eat, as long as you don't use chemical sprays or fertilizers.

An edible garden may contain flowers, herbs, berries, and plants. It does not need to be large and can be started with a few small pots and containers. Start in a sunny area with easy access to water; many edible plants will also grow well in partial shade. Make sure soil has proper drainage and plenty of organic matter. Plant things you would like to grow and eat like your favorite fruits and vegetables, herbs and other edible plants. Some suggestions for your edible garden include rosemary, basil, sage, mint, oregano, thyme, pumpkin and sunflower seeds, lettuce, tomatoes, corn, beans, strawberries and passionfruit, citrus trees, apricots and apple trees. If you plant what you love to eat, you will be much more enthusiastic about your garden.

CUSTOMER PAYMENT OPTIONS

JCSD offers several ways to pay your bill.

Online: www.jcsd.us

By telephone: (951) 685-7434

By mail: 11201 Harrel Street, Jurupa Valley, CA 91752

In person: JCSD headquarters 11201 Harrel Street, Jurupa Valley, CA 91752.

Drop box: (no cash please) at JCSD headquarters.

SEWER

Fats, Oil and Grease

Fats, oils, and greases (FOG) are becoming major environmental and public health problems in cities like Jurupa Valley and Eastvale. FOG is found in everyday food products such as; meat fats, lard, cooking oil, shortening, butter/margarine, baking goods, sauces, and dairy products.

When cooking oil and other fats are discarded into the kitchen sink, they harden inside sewer pipes leading to blockages. Over time, FOG accumulates and clogs the pipes that lead to the sewer main. When wastewater cannot make its way through the sewer pipes, it overflows into our homes, streets, lawns, and storm drains. So, let's be good neighbors and help keep FOG out of the drain.

Here are some myths about FOG's

Myth: You can wash grease with dish soap making it ok to pour down the drain.

Fact: Even though soap breaks up grease, it loses

its effectiveness downstream, and it allows grease to solidify on pipe walls.

Myth: Hot water will help grease float in the sewer pipe.

Fact: Running hot water will NOT help grease float nor will it break it down because the water will eventually cool as it flows, and the grease will become solid again.

With 379 miles of sewer main lines to maintain, we need your help to properly dispose of FOG

- Pour liquid oils and grease at room temperature

into heat resisting containers such as glass jars. Once full, seal it and throw it away with your regular trash.

- Scrape fats, grease, and food from plates and cooking utensils into the trash can before washing them or placing them in your dishwasher.

Stop by the JCSD main office and pick up your free fat trapper. The small plastic container is airtight and can sit on the kitchen counter. When the disposable bag inside is full, simply seal it and put it in the trash.

Proper Grease Disposal

1. Pour into container

2. Seal in bag

3. Place in trash

SOLAR CUP

Congratulations to the Roosevelt High School STEM Academy in Eastvale! In October, several students were selected to participate in the 10th annual Solar Cup. Primarily funded by the Metropolitan Water District of Southern California and Western Municipal Water District, Solar Cup is an education program in which high school teams, learn about water conservation and renewable energy by building and racing a solar powered boat during a seven-month period. The teams compete against each other in both sprint and

endurance races at Lake Skinner, located in Temecula.

As part of the program, the teams also research and complete various technical reports and create a water-related public service announcement. The culminating Solar Cup races will take place May 17th -19th. As this is the first competition for a team within JCSD's service area, the team has the "rookie" designation and is entitled to additional assistance and funding. Go team!

RAIN BARRELS FOR SALE!

Take advantage of the rest of winter by catching every drop. Rainwater is naturally "soft" and great for all plants. By collecting rain for later use, plant health will improve and you will save money.

Each rain barrel holds 50 gallons, comes with a hose bib and hardware, and is specially priced at \$40. Call 951 727-8002 for more information.

Spotlight on

SENIOR CONSTRUCTION INSPECTOR

The Engineering Department provides many of the basic services that effect the daily lives of those living within JCSD's service area. The Senior Construction Inspector (SCI) leads a team of inspectors, coordinates construction and inspection services with contractors, utility companies, other agencies, and the public. Construction projects include the installation of pipeline, man holes, fittings, valves, pumps, tanks, and grade alignment.

The SCI inspects project sites for compliance with Cal OSHA regulations and District safety standards and policies. He/she also interprets plans, specifications, codes, ordinances, and policies to contractors and District staff.

Tonya (pictured) has over 22 years of experience in construction inspection and holds various job-related certifications. As many other construction inspectors do, Tonya began her career by learning about soil and construction management at a local community college. She learned literally from the ground up! Tonya believes women make excellent construction inspectors and encourages more women to pursue careers in this exciting and rewarding field.

EVERY DROP COUNTS!

There is no doubt that the key to a sustainable water savings program is education. JCSD offers several educational programs for teachers and community groups. All education programs are provided free of charge.

- Classroom presentations
- Curriculum (K-12)
- Water Assemblies (schools only)
- Santa Ana River Field Trips
