

## **Your Rates At Work**

To maintain the quality and reliability of water and sewer services, JCSD's rates are carefully structured to fund essential operations and upgrades, such as:

- **Water Production & Treatment:** Ensuring safe, high-quality drinking water through modern treatment and testing systems.
- **Wastewater Collection & Treatment:** Managing wastewater through safe collection, treatment, and disposal to protect public health and the environment.
- **Infrastructure & Equipment:** Repairing and upgrading pipes, pumps, and tanks to prevent costly breakdowns and maintain smooth operations.
- **Regulatory Compliance:** Updating systems and processes to meet evolving state and federal regulations.

## Your Rates

The Jurupa Community Services District provides customers with an annual notice of changes in water and sewer rates.

In April 2024, JCSD adopted a five-year water and wastewater rate plan to ensure that customers continue to receive quality and reliable water service. The second year of the rate plan will be effective on January 1, 2026.

Rate plans are calculated to pay for necessary expenses critical to maintaining service.
